

CEI – AI Engineering & Enterprise AI Transformation

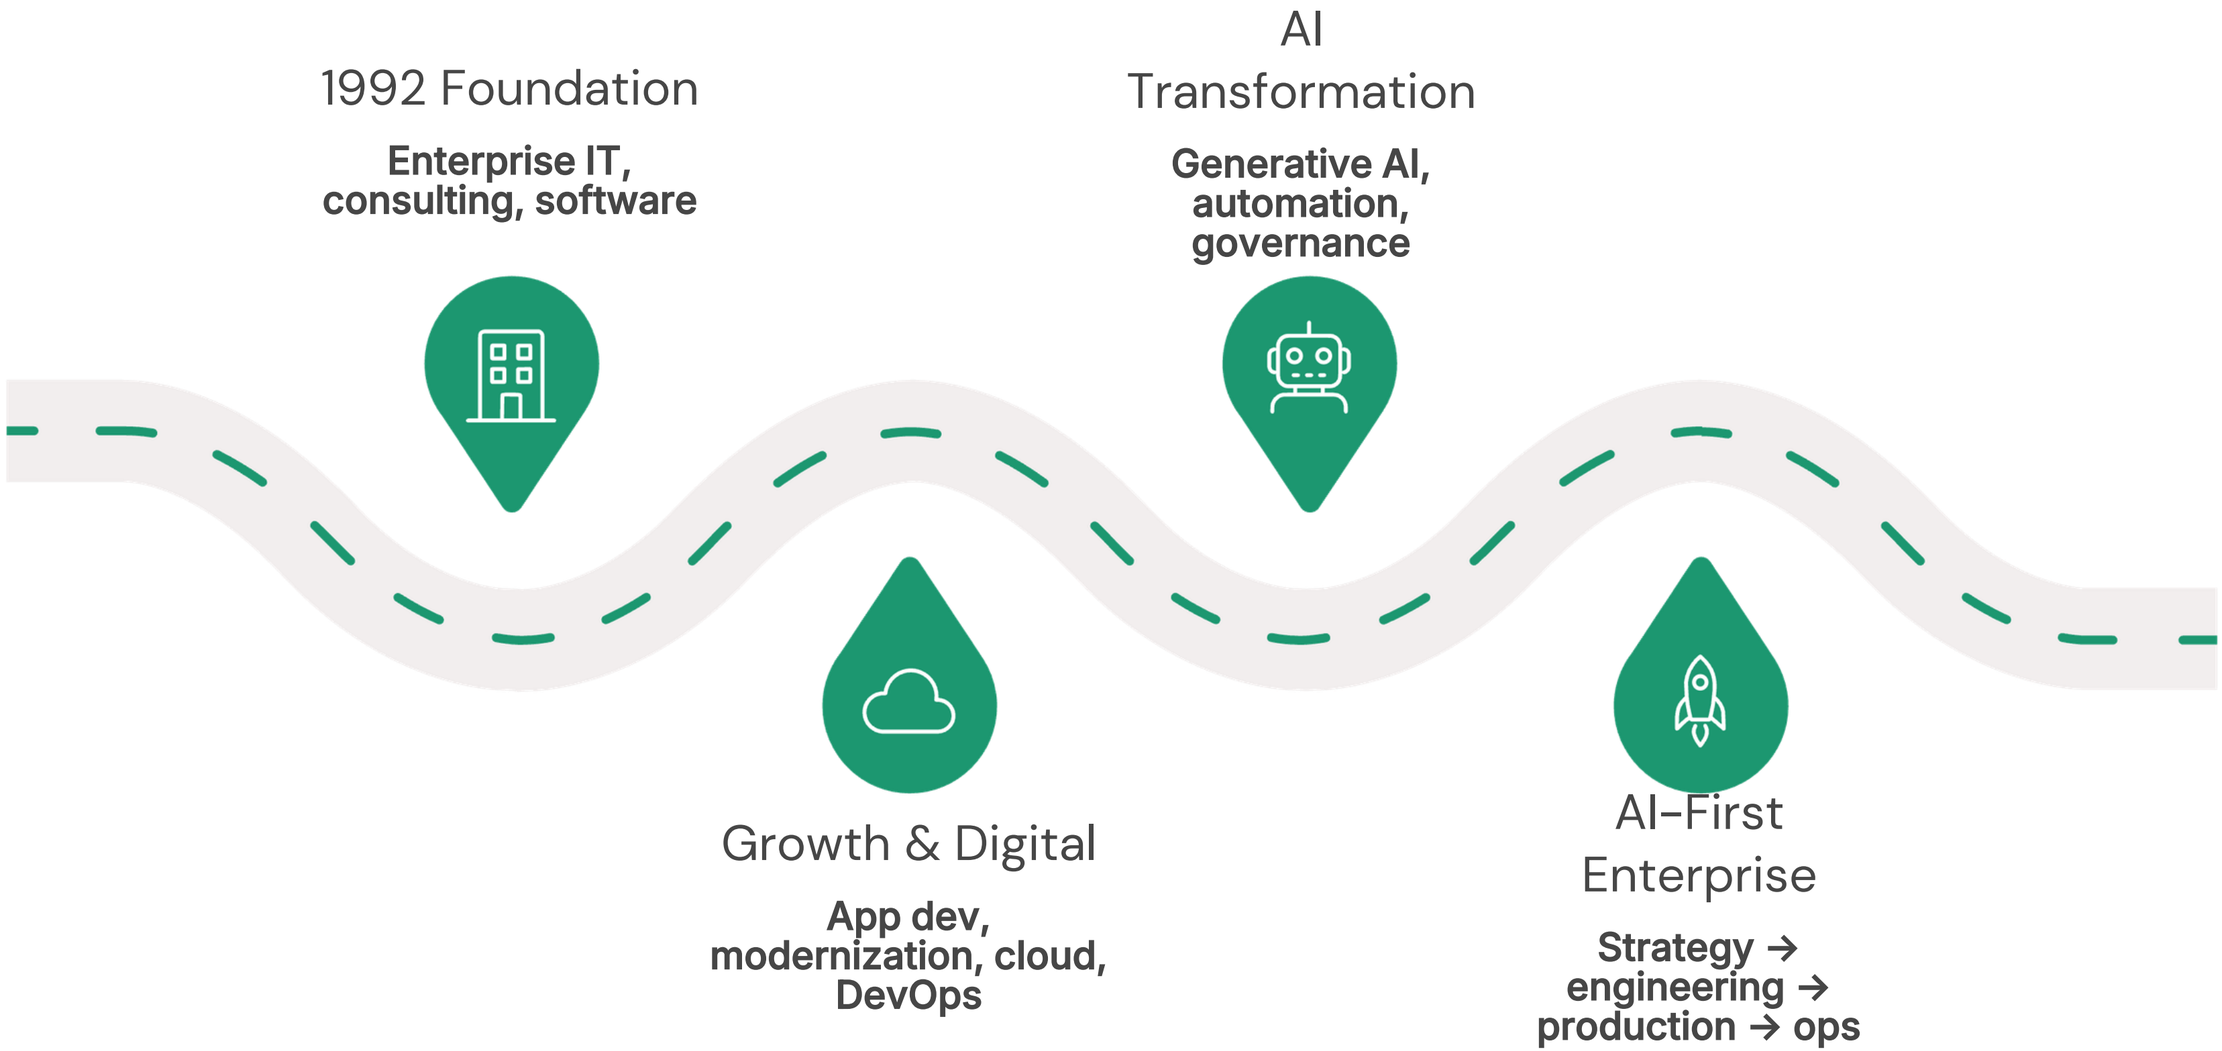

CEI designs, builds, and operationalizes production-grade AI to help enterprises move from strategy and experimentation to reliable, measurable business outcomes. We integrate AI into mission-critical platforms, enterprise data and applications, and operational workflows with an emphasis on secure, scalable, governed, cloud-native, and highly reliable AI.

Company Snapshot

Founded: 1992
HQ: Pittsburgh, PA, USA
Industry: IT Services & Consulting
Website: cei.ai
Experience: 30+ years enterprise transformation

From Enterprise IT to an AI-First Company

CEI evolved from classic enterprise technology and software services into an AI-first engineering organization. The company now embeds AI into operating models — moving beyond pilots into production-grade engineering, operations, and continuous optimization.

Timeline stages highlight how CEI layered modern cloud, data and DevOps capabilities to enable enterprise-scale AI: Strategy → Engineering → Production → Operations → Continuous Optimization.

CEI's Core Services

An integrated portfolio to deliver end-to-end enterprise AI transformation — from strategy and engineering to managed operations and continuous improvement.

AI Engineering

Enterprise AI, generative and agentic AI, automation, AI strategy and production engineering.

Software Engineering

Application development, modernization, maintenance, web & mobile, Java and open-source engineering.

Cloud & DevOps

Cloud transformation, infrastructure, DevOps, integration and modernization.

Data & Analytics

Enterprise data management, BI, big data platforms and analytics.

Managed Services

IT and application managed services, infrastructure support, operational excellence.

Digital Transformation

Digital strategy, agile transformation, UX/visual design, enterprise information management.

CEI's Enterprise AI Solutions

Three complementary, integrated solutions that move organizations from validated use cases to autonomous operations.

CLAIRVOYANCE™ — Prove AI Value Before You Scale

Agentic use-case framework that identifies high-value AI opportunities and maps them to measurable business goals. Uses a focused 40-hour Proof of Value workshop to validate ROI before scaling.

DARTS™ — Automate the Engineering Lifecycle

Spec-to-code framework that converts business requirements into validated software. Leverages agentic AI for development, automated testing, and governance to accelerate delivery.

PRISM™ — Transform IT from Reactive to Proactive

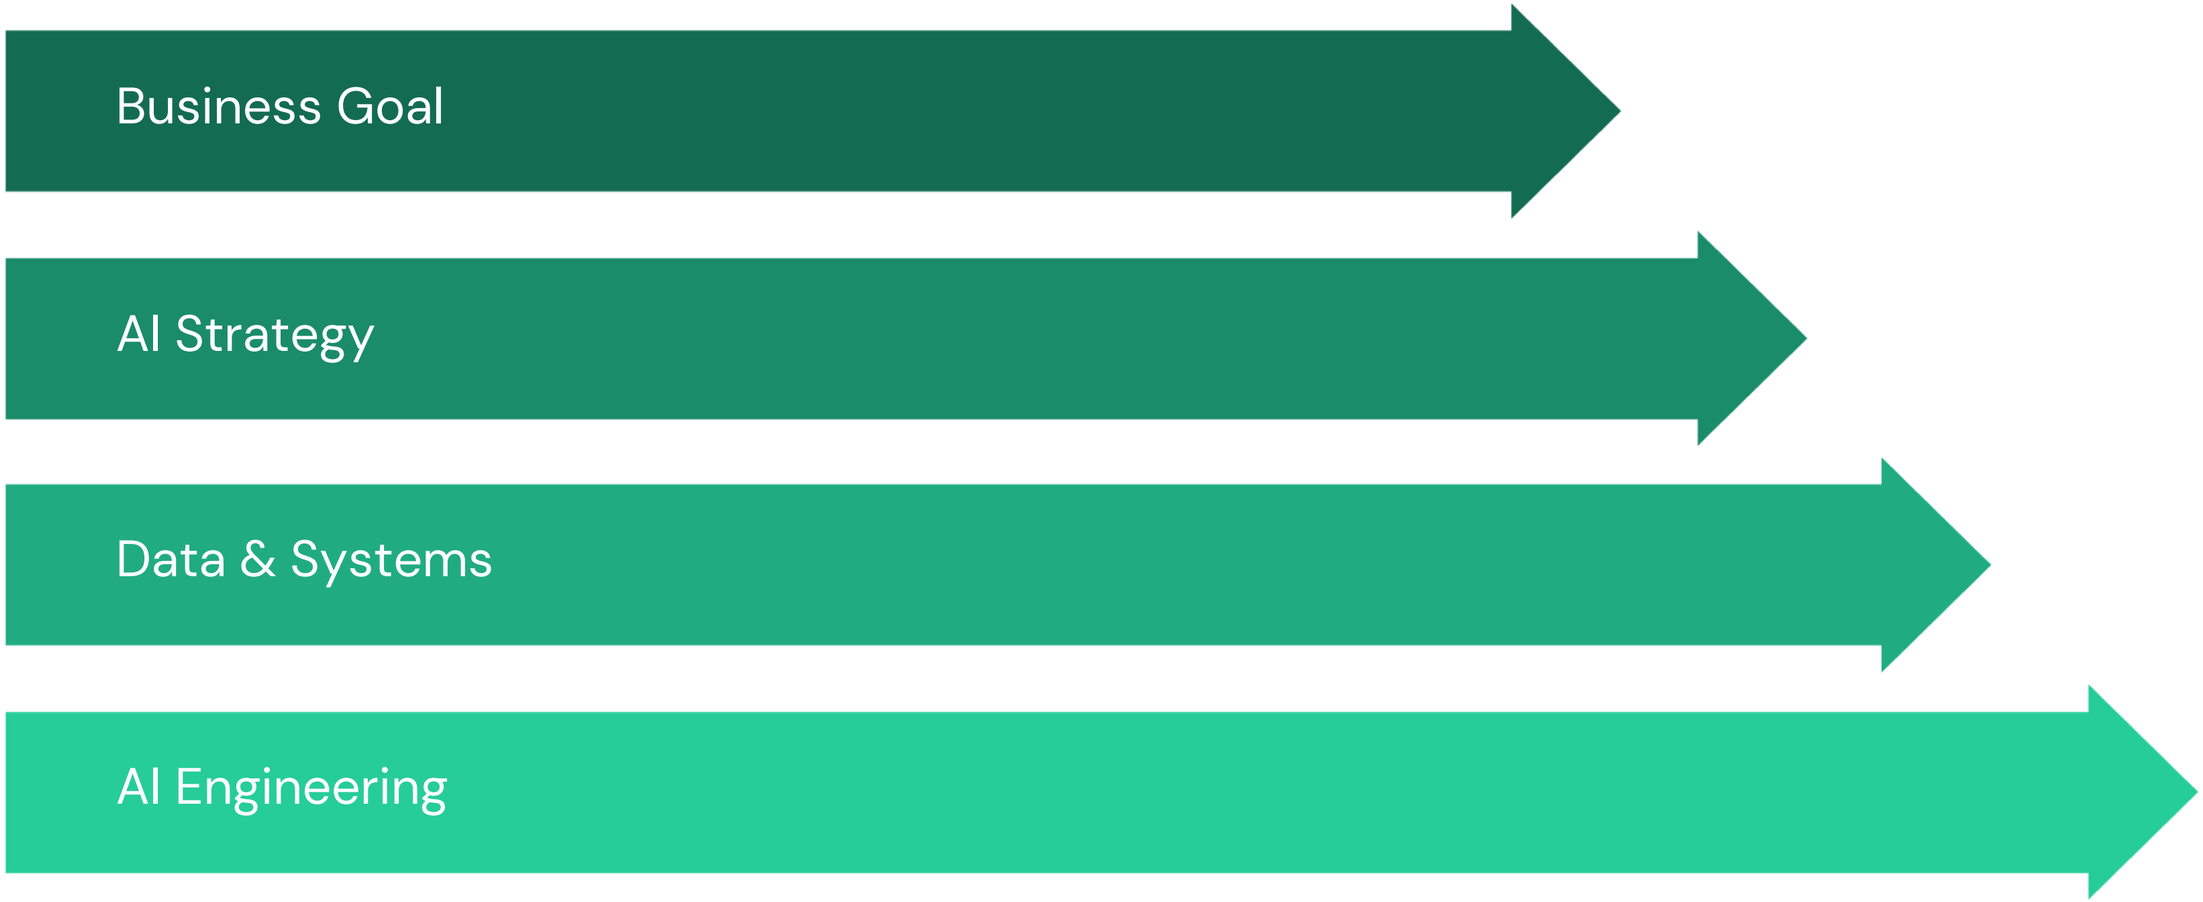

AI-native managed services and AI-driven IT operations for predictive detection, remediation, and self-healing operations to support continuous performance and reliability.

CLAIRVOYANCE → DARTS → PRISM

Use Case Validation → Intelligent Engineering → Autonomous Operations

From AI Pilot to Production

CEI's end-to-end process ensures models become operational capabilities embedded in enterprise systems and workflows.

CEI addresses common enterprise barriers — legacy systems, fragmented data, ERP/CRM integration, security & compliance, governance, monitoring, reliability, and scalability — while preserving human oversight.

Key principles: Secure | Governed | Scalable | Observable | Measurable

Technology Ecosystem & Enterprise Impact

Technology Ecosystem

CEI integrates AI into existing enterprise platforms and hybrid clouds — partnering across cloud, security, development, and SaaS ecosystems.

Integrations: ERP, CRM, ServiceNow, Hybrid Cloud, Enterprise Data platforms.

Business Impact

30+ Years

Enterprise Transformation

Decades of experience delivering enterprise-scale technology projects.

30–90%

Automation Gains

Range of automation achievable across service lines depending on use case and scope.

30–50%

Operational Cost Reduction

Typical operational efficiency improvements from automation and modernization.

5–7×

Faster Delivery & Decisions

Accelerated time-to-value through AI-enabled engineering and automation.

CEI emphasizes ROI-focused transformation, faster time to value, improved operational efficiency, responsible AI practices, and enterprise-scale deployments.

CEI – Building the AI-Ready Enterprise

CEI combines long-standing enterprise technology experience with modern AI engineering to help organizations shift from experimentation to reliable, scalable, and measurable enterprise AI.

AI Engineering

Build production-grade models and pipelines integrated with enterprise systems.

Agentic AI & Automation

Use agentic and automation frameworks to accelerate engineering and operations.

Cloud & Data

Hybrid cloud and enterprise data integration underpin scalable deployments.

AI Governance

Embed security, compliance, monitoring, and human oversight into every stage.

Key takeaways: AI integrated into workflows; focus on production and measurable outcomes; emphasis on security, governance and observability; combined expertise in technology, engineering and operations to deliver enterprise transformation.

"From AI Potential to Enterprise Performance."
