CEI (cei.ai)

Company Brief and Questions to Ask, in Simple Terms

Based on the information on CEI's website. Numbers are claims made by the company.

1. Who is CEI?

CEI is an **AI engineering and transformation company**. It helps big organisations (enterprises) take AI out of the 'trial' stage and make it a real, working part of their business systems, data and daily workflows.

Its tagline is **'Engineer the Agentic Enterprise'**. In plain words: build companies where AI agents help carry out the work, not just answer questions.

- **30+ years** serving enterprises, so it is an experienced company that has now moved strongly into AI
- Describes itself as a pioneer of **AI Platform Engineering**: building AI as a proper, reusable platform instead of one-off experiments
- Focus: AI that is **governed, scalable, secure and cloud-native**, so it can be trusted in important business operations

2. What does CEI actually do?

Many companies try AI in small pilots and get stuck. CEI helps with the harder part: **making AI run reliably at scale** and showing measurable business results.

Problem companies face	How CEI says it helps
AI pilots never reach production	Builds AI platforms and connects them to existing enterprise systems and data
Old (legacy) software is slow to change	AI-powered application modernization and faster software delivery
Operations need constant manual decisions	AI that monitors, predicts and helps control operations
Work is repetitive and spread across teams	Agentic AI workflows that carry out tasks across business functions
Worry about risk, rules and trust in AI	AI governance: managing risk, compliance and trust

3. The Four AI Platforms

CEI describes its offering as 'one operating system for the intelligent enterprise', made of four platforms.

Platform	Tagline	Simple meaning
eTWIN	Simulate | Analyze | Optimize	A digital copy of operations used to test scenarios, see what is happening and find improvements
DARTS	Modernize | Build | Accelerate	Uses AI to upgrade old applications and speed up building and delivering software
PRISM	Control | Predict | Decide	Helps run operations more autonomously and supports better business decisions

Platform	Tagline	Simple meaning
AIM-FIRE	Automate | Execute | Scale	AI agents that run workflows and get work done across different business functions

4. How CEI Works: The AI Platform Engineering Lifecycle

Step	Stage	In simple words
01	**Build**	Create the AI foundations
02	**Scale**	Spread AI across the whole company
03	**Govern**	Manage risk, rules and trust
04	**Operate**	Keep AI running reliably every day
05	**Transform**	Deliver measurable business results

5. Partners and Technology

CEI works with major technology companies, which shows it builds on well-known platforms.

- **Microsoft** (Solution Partner), **GitHub** (Advanced Partner), **AWS** (Advanced Partner)
- **Sitecore** (Solution Partner), **Salesforce**, **NetSuite** and **Databricks** (Partners)
- The About page also lists **Google Cloud** and **Arctic Wolf** among its technology relationships
- Other offerings mentioned: **Cosine Match** (AI talent acquisition) and **AI Governance**

6. Key Numbers (as claimed by CEI)

Number	What it refers to
50%	Faster delivery
4X	Faster modernization
5X	Faster delivery and decision making
+50%	Automation across service lines
+30%	Reduction in overall maintenance costs
80%	Enhanced security
30+ years	Serving enterprises
2500+	Microsoft projects delivered
100+	Consultants for cloud, platforms and workforce solutions
99%	Projects delivered on time and on budget

7. Culture and Values

CEI says innovation begins with people and encourages continuous learning, curiosity and creativity. Its stated values are **excellence, integrity, dedication, fairness, trust and fun**. It also invites people to join on 'vanguard projects' with industry experts.

8. Questions You Can Ask About CEI

Good questions show you did your homework. Pick the ones that fit your situation (interview, client meeting or networking).

About the company and strategy

- CEI has 30+ years of history. How has the company's focus changed as it moved into AI platform engineering?
- How do the four platforms (eTWIN, DARTS, PRISM, AIM-FIRE) work together, and which one is growing fastest?
- What does 'agentic enterprise' look like in a real customer project today?
- Which industries use CEI's AI platforms the most?
- How does CEI help clients move from an AI pilot to full production?

About the work and technology

- Which technologies and cloud platforms do teams use most (Microsoft, AWS, Databricks, GitHub)?
- How does CEI handle AI governance, such as risk, compliance and trust, in client projects?
- How do you measure success, for example the '50% faster delivery' and '4X faster modernization' results?
- What role do humans play when AI agents run workflows for a client?
- How do you connect AI to clients' existing systems and data safely?

About the role, team and growth (for interviews)

- What would a successful first 90 days look like in this role?
- What does the team structure look like, and who would I work with most?
- What training, certifications or partner programmes (for example Microsoft, AWS) does CEI support?
- What does career growth look like for someone starting in this area?
- How do teams balance fast delivery with quality and security?

9. Questions CEI Might Ask You (with Simple Answer Ideas)

Q. What do you know about CEI?

A. It is an AI engineering and transformation company with 30+ years of experience. It builds AI platforms (eTWIN, DARTS, PRISM, AIM-FIRE) that help large companies move from AI experiments to reliable, measurable business results.

Q. What is Agentic AI in simple words?

A. AI that does not just answer questions but plans steps, uses tools and completes tasks with limited human help, while humans keep oversight.

Q. Why do many AI projects fail to reach production?

A. They are built as demos without proper data connections, security, governance, monitoring or ownership. Production AI needs all of these plus clear business goals.

Q. Why do you want to work at CEI?

A. Mention the focus on production-grade AI, long experience with enterprises, strong partnerships (Microsoft, AWS, GitHub, Databricks), and your interest in learning how AI is delivered at real scale.

Q. What is AI governance and why does it matter?

A. Rules and controls for using AI safely: managing risk, compliance, privacy and trust. Enterprises need it so AI decisions are explainable, secure and safe to rely on.

Q. How would you explain AI Platform Engineering to a non-technical person?

A. Instead of building a separate AI tool each time, you build a strong shared foundation, like a factory, so AI solutions can be created, run, monitored and improved quickly and safely.

10. 30-Second Summary

> CEI is an enterprise AI engineering company with 30+ years of experience. It builds AI platforms for simulation (eTWIN), modernization (DARTS), operational decision-making (PRISM) and agentic workflow automation (AIM-FIRE), and it guides clients through Build, Scale, Govern, Operate and Transform so AI delivers measurable business results.
