CEI INDIA

person 1 {

ROUND 1
Aps,code snippets,technical question from js,dbms,algorithms time complexity
then 7 programming question in that only 4 is enough

Round 2
Technical 1
How do you attract web users?
3 tables join query
Agile
Application of a data structure is said and asked for which data structure
If 10 pages are used how would you make only selected page to be rendered ans lazy loading
A url is given then asked for it parts
Get and post method
Project explanation
Abstraction code implementation
Why java doesn't support multiple inheritance
Process vs thread
Priority scheduling working a d real life example
Application of binary search

Round 3
Technical 2
Scenario based question on Technical topics
About fav subject and worst fav subject

Round 4
Hr

Overall everyone was friendly and open up and speaking it must needed...if
you show up what you know well then they will sure hire you..

All the best guys..✨🤝

}

person 2 {

As much as I would like to help you out, the interview process is completely reformed now and not like how I attended in 2024. One tip I would share though is be strong in basics and foundations. Be confident and an extra knowledge about ai agents and agentic ai are welcome as well

}

person 3 {

1. It would be a apt + basic computer science + logical coding round (was pen was paper before, now this could be an online test)

2. First Technical Interview (Devs would take it, just direct technical questions)

3. Second Technical Interview (Manager or Snr Devs Would Take It, in direct technical question, and mostly see if you fit)

4. HR (just making sure you are okay with the role)

Tips!?

First round is a basic filter, just prep basic Computer Science Concepts And Some Easy Medium But Cool Coding Questions

Just be through of your resume!!

Stay Confident and understand the basics of Computer Science

Emphasis on "Understand"!!

}

person 4 {

When I was attending there were 4 Rounds

Round 1: Written Test Logical Aptitude & Technical Questions And 7 Problems→ You must answer at least 4 questions (mandatory) Algorithmic or programming-based solutions

Round 2: Technical Interview - I

Round 3: Technical Interview - II

Round 4: General HR
General discussion Formalities and fitment check

In Tech HR The Questions will be from your Resume, the Domain you are Interested, Problem Solving (DSA), technical fundamentals

Ithu Na Attend panra apa irunthathu
It may vary now ☺

}

person 5 {

Hi Sanjay, I’m not sure about the placement details for the current year, as we have now transformed into an AI-based organization. However, I can explain the process and details based on my experience

In total, 3 rounds will be conducted
1. Written test - 60 mcqs and 6 algorithms
Out of the 60 Mcqs, 30 will be verbal and quants and 30 would be ca basics like sql, guess the output for some code snippets.
You have to write the pseudo code for 4 algorithms out of the 6 given

2. Technical interview

3. Technical interview

Both interviews will be conducted in office at the same day

Please make sure you know your resume and if you don’t know any answer feel free to say the same.
For the interview you will get questions like sql commands, writing pseudo code and some scenario based questions

}

person 6 {

1st round as usual aptitude round.

If you got selected in that 1st round next,
There will be two technical rounds. Focus on the above to pass the first and for the second, you need to be confident about the technical domain based skills that shine in your resume.

Whatever domain you have mentioned in the resume, you must prepare a questionnaire yourself to evaluate your knowledge it really helps in round two. And SQL queries and code snippets would be asked.

The main concepts to focus on would be OOPS, Networking, Cloud related topics, OS related topics and SQL Queries.

You will be asked to write the query and also to write a program structure based on the on-the-spot use case provided.

The below are commonly asked qns

Where do you see yourself in 5 years?, What is your ambition?, What is the project you worked in college, and questions on that domain and so on.

}

person 7 {

Round 1
All domains question will be there...including aps...dbms..etc...and programming question too

Round 2
Technical interview from resume and area of interest

Round 3
2nd technical....application based questions...

Round 4
Hr

1. College Project work
2. OOPS Concepts(java)
3. SQL(join , cte ,subquery varaikum theriyum na)
4. JAVA,Python (basic to intermediate theriyum na)
5. Software development life cycle.(ithu enathu na?)
6. Basics of Algorithms and Data structures(array,linked list, stack,queue, tree,graph --ithoda concept theriyum na..problem solve pandra level ku theriyathu)
7. Programming Arrays(ithu normal array va na?)
8. Logicals(ithu enaney therla na)
9. Web development(ithum therla na)

Candidates have to take 2 Technical rounds and one HR round. Approved candidates will be offered on same day.

}

person 8 {

Hi, You just have to be good in Core CSE concepts-DB,Web related stuffs, AI related stuffs like Agents,RAG,pipelines.
For 1st round itll be pen and paper , itll have basic CSE qns around 50 may be, then 8-10 logical/programming qns, youll be asked to write algorithms or the code itself
Then to clear 2nd round u shou;d have good knowledge in DB, Web development, and some practical or application oriented qns
for the 3rd round as i told AI related stuffs.

Hi da, for the second round you have to be clear about OOPS concepts, then DB related qns, Web development, fundamental AI concepts I guess most of them will be in ur syllabus, then software development lifecycle concepts

}
