BI3 TECHNOLOGIES (INTERVIEW EXPERIENCE)

Round 1

Section 1: Aptitude (MCQ)

- Basic aptitude questions.

Section 2: SQL (MCQ)

- Basic SQL concepts and query-based multiple-choice questions.

Section 3: Coding

- Problem 1: Array-based problem involving performing the required operations on the given input array and returning the expected output.
- Problem 2: String-based problem related to substring checking or string comparison.

Round 2

Group Discussion (GD)

- General discussion on a common topic.
- Focus on communication skills, confidence, and the ability to express ideas clearly.

Round 3

Technical Interview

This round mainly focuses on technical knowledge and problem-solving.

- Java - OOP concepts and basic Java questions.
- SQL - SQL concepts. Candidates are expected to solve SQL queries during the interview.
- React - React fundamentals and React Hooks.
- Coding - LeetCode-style programming questions. Questions are generally based on problem-solving and logical thinking (Easy to Medium level). The number and difficulty of coding questions may vary depending on the candidate's performance during the interview.

Round 4

Technical Interview 2

This round varies depending on the candidate.

For some candidates, the interview focuses on:

- Explaining one of their projects in detail.
- Database concepts.
- Database design and optimization.

- Questions on redesigning or improving a database for better performance and efficiency.

For other candidates, the interview may focus on:

- DSA (Data Structures and Algorithms) questions.
- Solving coding problems.
- Basic technical questions related to programming concepts.

Round 5

Task Presentation + HR Interview

- Each candidate is assigned a different practical task.
- Most tasks are related to Data Engineering or Data Analysis.
- Candidates may be given a dataset and asked to analyze it, identify insights, and present their observations or recommendations.
- AI tools are allowed while completing the task.
- A fixed amount of time is provided to complete the task.
- After completion, candidates present their solution and explain their approach.
- The round concludes with basic HR questions.
