

SECURIN INTERVIEW EXPERIENCE

****Communication plays a major role—communicate clearly and confidently.**

****Every round is a shortlisting round.**

Round 1 – Telephonic Interview

A call will be scheduled by HR, where you will be assessed based on your technical knowledge, domain expertise, understanding of the subject, and communication skills.

Questions may be based on:

- Your resume (skills mentioned), projects, and experience
- Your knowledge about the company and its products (have a look at [Securin's website](#))

If you have cybersecurity-related certifications or experience, mention them clearly. If not, that's fine!

Round 2 – Assessment

In this round, you'll be asked to build an end-to-end application based on the given requirements.

- The task will mostly involve API handling (refer to the documents shared in the email).
- Ensure your output is delivered via an API if specified in the requirements.
- You may be given on-the-spot changes, and your adaptability will be observed. Instead of outright rejecting a difficult challenge, try your best to approach it.
- Have a clear understanding of the problem statement before executing your solution.
- Explain your workflow to the evaluator, covering why and how it works.
- You can use any tech stack, but it should align with what you mentioned in the first round.

Submission Requirements:

- Code, README, API documentation

- Challenges faced and solutions implemented
- Push your work to GitHub for evaluation

Round 3 – Coding Round (Technical Interview)

Clear communication is key.

- This round will focus on assessing the code you submitted in the prior round.
- You'll need to explain your solution end-to-end.

Possible questions:

- Why, how, and what is the idea behind your approach?
- What challenges did you face, and how did you resolve them?
- How do you handle on-the-spot changes?
- Understanding of the tech stack you used.

You may also receive questions from your resume (projects and skills), but the primary focus will be on your assessment submission.

Round 4 – Technical Interview 2

- Questions will cover your projects, skills mentioned in your resume, security concepts, networks, Linux and Windows basics, penetration testing, and related cybersecurity terminology.
- Learn about Securin—its products, services, what makes it different, and related details.
- Be ready to answer why you are interested in cybersecurity and what excited you about applying for this role at Securin.

Round 5 – CEO Round

This is more like a personal HR round.

- **Communicate clearly and confidently**—this is the first thing they will notice.
- You may be asked about previous rounds (assessment, technical interviews), your family background, and the company's profile.
- Prepare a strong self-introduction and a solid pitch about yourself.

HR will keep you updated about your status after each round. Feel free to reach out to them if you have any queries.

After successfully clearing the interview rounds and being hired for the role of Penetration Tester, full-time conversion will be contingent on your performance in the exam. You will receive training for the exam during your internship period, and your conversion to a full-time role will be based on how well you perform in the exam.

Do well—All the best!
