

WORKHALL (INTERVIEW EXPERIENCE)

Salary Package: 5 LPA

Round 1:(Day 1)

Section 1: **MCQ** from aptitude, coding, DSA, SQL, DBMS, networking, and OS.

Section 2: **Essay writing:** technology that you have learned recently.

Section 3: **2 programming questions:**

sliding window (LC 239),

longest common prefix (LC 14)

Round 2:(Day 2)

Questions from HTML tags and types of CSS.

Working of OSI Layers with examples.

Amicable numbers and Armstrong numbers (logic).

Situations where to use MongoDB.

Schema of MongoDB.

Comparison of relational and non-relational databases.

Comparison of MongoDB and SQL.

Aptitude questions: number of squares in chess board (ans: 204)

Round 3:

As I have mentioned networking is my area of interest, so most of the questions were from networking.

How information travels from layer 1 of one device to layer 1 of another device.

Role of gateways in the transmission of information.

Role of router and switches.

OSI Layers.

How the information travels through these network devices.

Questions from essay writing: what made you learn this technology, and who motivated you?

Round 4:

Table 1:

student: name, id, subject_name, marks

Table 2:

Subject: subject_name, faculty

From Table 1 make a query that gives maximum marks for each subject.

Convert the above SQL query into code (HINT: use of struct).

Differentiation of inner join and natural join with tables 1 and 2.

Can we write nested structure in C, if so, then why there is a concept of oops, if not why?

Easy to medium questions from structure concept.

Write and explain the programs that you wrote in Round 1 with time and space complexity.

Round 5:

Personal HR

Self into, Family background, Achievements, Hobbies, Strengths.

Some basic questions from certification and achievements.

Round 6:

To code the number of days between two dates and explain (any lang.)

Optimization of the above code.

Questions from joins in SQL

Is there any possibility of optimizing the sliding window question that I wrote in Round 1, if so optimize it.
