ROUND 1 – CODING 1

The first round of Infosys HackWithInfy 2026 was a virtual coding assessment conducted on the Wingspan platform as a proctored assessment.

The test consisted of four coding questions with increasing difficulty: Easy, Medium, Hard, and Complex.

ROUND 2 – CODING 2

The second round was an in-person coding assessment conducted through the Wingspan proctored assessment platform. It followed a similar four-question format, and a minimum of approximately 2.5 questions needed to be solved to have a strong chance of progressing.

ROUND 3 – CODING 3

The third round was an in-person coding round conducted on the HackerRank platform. Compared with the earlier coding assessments, this round felt relatively easier to solve.

Across all three coding rounds, the questions covered arrays, strings, dynamic programming, graphs, and trees. Special focus was given to sliding window and two-pointer techniques. The logic behind the problems was not always overly complicated, but identifying the correct approach quickly was the main challenge.

CODING QUESTIONS COVERED

- 1. No Prefix Set

https://www.hackerrank.com/challenges/no-prefix-set/problem

- 2. Challenges

https://www.hackerrank.com/challenges/challenges/problem

- 3. Sherlock and the Valid String

https://www.hackerrank.com/challenges/sherlock-and-valid-string/problem

- 4. Placements

https://www.hackerrank.com/challenges/placements/problem

- 5. Recursive Digit Sum

https://www.hackerrank.com/challenges/recursive-digit-sum/problem

- 6. Average Population of Each Continent

https://www.hackerrank.com/challenges/average-population-of-each-continent/problem

- 7. Kruskal (MST): Really Special Subtree

https://www.hackerrank.com/challenges/kruskalmstrsub/problem

- 8. Contest Leaderboard

https://www.hackerrank.com/challenges/contest-leaderboard/problem

- 9. Bus Station

https://www.hackerrank.com/challenges/bus-station/problem

- 10. Flipping the Matrix

https://www.hackerrank.com/challenges/flipping-the-matrix/problem

ROUND 4 – TECHNICAL INTERVIEW

All the questions asked in the technical interview were based on the technologies, projects, skills, and information mentioned in my resume.

The technical interview started with questions about my college life, followed by questions about my family and general background. The interviewer then moved into technical fundamentals covering AI, computer vision, speech technologies, software architecture, cloud, DevOps, APIs, databases, RAG, and problem solving.

AI / ML / GENAI, COMPUTER VISION AND SPEECH TECHNOLOGIES

- What is Retrieval-Augmented Generation (RAG)?
- What is Natural Language Processing (NLP)?
- What is BERT?
- What are diffusion models?
- How does a vector database work?
- Why are vector databases used in RAG systems?
- Explain the overall architecture of a RAG system.
- Explain the flow from document ingestion, chunking, embedding generation, and vector storage to similarity search, retrieval, prompt construction, and LLM response generation.
- What is YOLO and why do we use YOLO for object detection?
- What are bounding boxes and why are they used in object detection?
- How is the confidence score for an object calculated in YOLO?
- What are the limitations of rectangular bounding boxes for representing irregularly shaped objects?
- Which approach overcomes this limitation? Instance segmentation models such as Mask R-CNN can generate pixel-level segmentation masks.
- What is the difference between a bounding box and a segmentation mask?
- What technologies or models can be used for Speech-to-Text (STT) implementation?
- What technologies or models can be used for Text-to-Speech (TTS) implementation?

SOFTWARE, CLOUD, DEVOPS AND SYSTEM CONCEPTS

- How does client-server architecture work?
- What is an EC2 instance and what is it used for in cloud computing?
- Why is Docker used?
- Why is caching used and how does it improve application performance?

REST APIs AND HTTP

- What are REST APIs and how do they work?
- Are you aware of the newly standardized HTTP QUERY method?
- The HTTP QUERY method is designed for safe, idempotent server-side queries where the query input can be sent in the request content rather than encoded into the URI.
- How is QUERY different from GET and POST?

SQL AND DATABASE TOPICS

- Explain SQL window functions and their roles.
- Explain the different SQL JOIN types and their uses.
- What is the difference between ORDER BY and PARTITION BY?

- What is the difference between WHERE and HAVING?
- What are LIMIT and OFFSET?

LEETCODE CODING TASKS

The interview then moved to live coding/problem-solving tasks:

- 3. Longest Substring Without Repeating Characters

https://leetcode.com/problems/longest-substring-without-repeating-characters/

- 5. Longest Palindromic Substring

https://leetcode.com/problems/longest-palindromic-substring/

SQL QUERY TASKS

- Find the 3rd highest salary in an organization and return all employees who have that salary when multiple employees share the same 3rd highest salary.
- Find the Nth highest salary of a person.
- Find a person whose name starts with A, contains S, and ends with N.
