Infosys On-Campus Recruitment – Interview Experience

Name : Sriram M
OA Date: 11 August 2026
Technical Interview: 19 August 2026
Result: 21 September 2026
Package: ₹7 LPA (DSE)

Round 1 – Online Assessment

The first stage of the Infosys on-campus recruitment process was the **Online Assessment (OA)**, which I attended on **11 August 2026**.

The OA consisted of **four coding questions**.

Question 1 – Array + XOR of Neighbours

The first question was based on an array.

For every element that had both a **left and right neighbour**, I had to calculate the XOR of those two neighbouring elements.

The logic was:

```
xorValue = arr[i - 1] ^ arr[i + 1]
```

Then the XOR value was compared with the current element:

```
if arr[i] > xorValue:
    count++
```

Finally, the counter was printed.

I was able to **solve this question completely**, and my solution passed **12/12 test cases**.

Question 2 – Climbing Stairs

The second question was based on the **Climbing Stairs** problem.

I was able to develop a solution, but **some test cases did not pass**.

The solution required further optimization, and my approach was not sufficient for the required constraints. I was unable to reach the expected optimized solution during the assessment.

Therefore, this question was **partially solved**.

Question 3 – Binary String

The third question involved a string containing **0s and 1s**.

The problem involved matching/balancing the number of `0`s and `1`s, and **inversion of the bits** was also allowed as part of the operation.

I was not able to completely solve this question.

I do not remember the complete original problem statement, so I would not add details that I am not certain about.

Question 4

I **do not remember the details of the fourth question**.

OA Outcome

My OA performance was:

Question	Result
Q1 – Array + XOR	**Fully solved – 12/12**
Q2 – Climbing Stairs	**Partially solved**
Q3 – Binary String	**Not completely solved**
Q4	**Details not remembered**

Despite not completely solving all four questions, I was **shortlisted for the technical interview**.

Round 2 – Technical Interview

My technical interview was conducted on **19 August 2026** at **PSG College of Technology**.

The interview was not limited to coding. It was a broad, **resume-driven technical interview**, where the interviewer moved through my projects, technical subjects, system design and DSA.

The exact role was **not specified to me beforehand**; the process was conducted for the **DSE/SP roles**.

1. Coding

The technical interview started with coding.

Question 1 – Cost Function

The first coding question involved **finding/calculating a cost function** based on the conditions given in the problem.

I was able to **solve this problem completely**.

Question 2 – LCP

The interviewer had another coding problem based on **Longest Common Prefix (LCP)**.

However, I **did not attempt this question** because after the first coding problem, the interviewer directly moved into the technical interview discussion.

2. Self-Introduction

After the coding portion, the interviewer asked me to **introduce myself**.

I introduced my academic background, technical interests, projects and experience.

This led directly into a deeper discussion of my projects.

3. Deep Project Discussion

The interviewer went **deep into my projects**.

The discussion covered areas such as:

- Project architecture
- Implementation
- Technologies used
- My individual contribution
- Technical decisions
- How different components worked together
- Problems encountered during development
- How those problems were solved

The interviewer was particularly interested in whether I actually understood the technologies and implementations mentioned in my resume.

4. DBMS

The interviewer asked questions related to **DBMS**.

The discussion was based on my technical background and the database-related concepts and keywords present in my resume.

5. OOP

The interview also covered **Object-Oriented Programming**.

The interviewer asked questions to evaluate my understanding of OOP concepts and their practical usage.

6. Machine Learning

Since my resume contained **Machine Learning** projects and experience, the interviewer asked ML-related questions.

The discussion focused on the concepts and technologies I had mentioned in my resume.

7. NLP

The interviewer also asked questions related to **Natural Language Processing (NLP)** because NLP was part of my project/technical background.

8. Resume-Based Technical Questions

A major part of the interview was completely **based on the keywords in my resume**.

The interviewer picked different technologies, concepts and project-related terms from my resume and asked questions about them.

This made it important to actually understand everything written on the resume rather than simply listing technologies.

9. System Design

The interviewer also asked **system-design-related questions**.

The questions included:

- **Design principles**
- **Load balancing**
- **Rate limiting**
- How these concepts can be implemented
- How they were handled in **my project**
- How the architecture would behave as the number of requests increases

The discussion was not purely theoretical. The interviewer connected the system-design questions to **my own project**, asking how concepts such as **load balancing and rate limiting** were implemented or could be handled in my architecture.

10. DSA / Data Structures

The interviewer then moved into **Data Structures and Algorithms**.

The discussion included:

Trie

Questions about **Trie**, its structure and working.

Segment Tree

Questions about **Segment Tree** and its applications.

Dijkstra

Questions related to **Dijkstra's algorithm** and shortest-path concepts.

11. Java / Collections

The interviewer also asked Java collection-related questions.

HashMap Collision

I was asked about **HashMap collisions**.

I was able to answer this question.

HashMap vs ConcurrentHashMap

I was then asked about the difference between **HashMap and ConcurrentHashMap**.

I was not able to answer this question completely.

Final Result

After the interview, I had to wait for the result.

The interview was conducted on:

> **19 August 2026**

The result was announced by my college **33 days later**, on:

> **21 September 2026**

I was selected in **Infosys Batch 1** as:

Digital Specialist Engineer – ₹7 LPA
