

Company: Zoho
Role: Software developer

Round 1:

Duration:90 minutes

10 Java programming output prediction and 10 Aptitude questions, For output prediction prepare the basics of the language(like switch, If,else,loops, try cache, continue ,break like that).They only test your problem solving and debugging skills,make sure you practice the output prediction with complex codes, Also for aptitude, they only ask basic questions, you can refer the logic io yt channel for aptitude.

Round 2:

Duration:2 hours(may be extended depends)

This is a coding round where they are given 5 coding questions, you need to solve and explain the questions and logic to the panel members.

1. Regex pattern, similar to leetcode
<https://leetcode.com/problems/regular-expression-matching/description/>
2. Pattern question
3. You are given a string which consist of alphabet and numbers only, you need to remove the duplicate elements,in such a way that a first occurrence of alphabet and last occurrence of numbers and maintained.
4. Given a string which consist of alphabets, you need to find the longest string that satisfy the following condition.
 - a. At least contains one vowel
 - b. The vowels should be ordered in this way (aeiou), means after all a only e should occur
5. Given 3 string(sentences), you need to remove a fragment that match in all the strings,a fragment is consecutive 3 words in a sentence

For most of the question, they will not allow you to use any inbuilt functions.

Round 3:

Duration:3 hours

This is a Application development round, I am tasked to design a taxi booking application, initially they instructed us to go through the question and explain how we are going to design the solution, we need to develop a console based application with preferred language with OOPs, I done it in Java(most recommended), After they told me to start the code, they were friendly, I asked some doubts and cleared my design, If you feel stuck discuss with your panel member how can we design this like that,totally there are 13 tasks out of I completed 12.5 tasks. And moved to the next round.

Tip: Don't overthink, learn OOPS and JAVA then practice 2 or more questions, identify the important parts and start coding and make the adjustments on the go.

Round 4:

Technical Interview:

They started with my self instruction and asked multiple aptitude questions and puzzles and asked one coding question, first one was you need to print 1 to N without using any loops and conditional statements and you are given a function which generate a 1 to 5 numbers, you need to random number between 1 to 7, but the number generated should be follow a uniformity.

Round 5:

HR round;

In this round the HR is very friendly, he asked about me and my family and why zoho, what you do after you start earning, and asked about what is result oriented and I asked him some book suggestion then we both talked about the book I am currently reading(book name:Secret from rhoda bryne) and he explained his point of you, I had a meaningful discussion.

Finally after 5 days, I got a message from placement cell that I am selected for full time role with 7LPA
