Q60 MCQ Hard 1 pt

Directions: The problem has a question followed by two statements which are marked I and II. Use the data given in A and B together or separately and mark.
What is the value of p – 2q?
I. p – 3q = 4
II. p> 0 , q > 0

A. Only I alone sufficient

B. Only II alone sufficient

C. Both the statements are sufficient

D. Cannot be determined ✓

EXPLANATION
From Statement I: p - 3q = 4, so p = 3q + 4. Then p - 2q = (3q+4) - 2q = q + 4. This depends on the value of q, which is unknown. Statement II (p > 0, q > 0) only gives sign constraints. Together, we still cannot determine a unique value of q, so p - 2q cannot be uniquely determined. Answer: Cannot be determined.
